

Cabinet – 15 July 2009

Highway Maintenance Strategy 2009-2012

Portfolio:	Councillor Ansell, Transport
Service:	Engineering & Transportation
Wards:	All
Key decision:	Yes
Forward plan:	Yes

1. Summary of report

The report seeks cabinet approval of Walsall Council's Highway Maintenance Strategy 2009-12 ("the strategy").

Walsall's Highway Maintenance Strategy 2009-12 has been designed to direct and inform in detail service users and those involved in service delivery about the way in which Walsall Council intends to maintain its highway network over the next three years. Particular emphasis has been placed upon service delivery improvements and how strategic intentions will be realised through the asset management process strategically, tactically and operationally.

The strategy forms an additional part of the Highway Asset Management Plan (Appendix G) which was formally approved by Cabinet on 19 November 2008.

The strategy itself runs to considerable length as it is intended for the guidance of officers and, of necessity, sets out detailed policies and procedures. A copy is available on the Council's Committee Management Information System web pages and hard copies have been made available in each of the political group rooms and to independent elected members prior to Cabinet. The draft programme of works is contained as **Appendix A** to this report.

2. Recommendations

- 2.1 That Cabinet approves Walsall Council's Highway Maintenance Strategy 2009-12.
- 2.2 That Cabinet approves the Provisional Highways Maintenance Works Programme 2009-12 contained in **Appendix A**.

- 2.3 That the Executive Director for Neighbourhood Services be delegated to make minor amendments to the strategy in the light of case law or legal advice, which might assist in managing the risk of litigation in relation to the statutory duty to maintain the highway.
- 2.4 That editorial changes to the strategy, including formatting, be delegated to the Head of Engineering & Transportation.

3. Background information

- 3.1 Walsall's highway network is the largest and most visible community asset for which the authority is responsible. It is in constant use by both the public and commerce and is fundamental to the economic, social and environmental vitality of the borough. In order to serve the needs of our highway users, it is crucial that the highway network is properly maintained and managed.
- 3.2 The highway authority is responsible for a road network of 532 miles (i.e. 856km) as well as footways, footpaths, public rights of way and cycle ways and associated highway infrastructure elements such as bridges, traffic signals, drainage systems, street lighting, road signs etc. Walsall Council recognises the importance of the highway network and the vital service that these combined assets provide.
- 3.3 The Code of Practice for Highway Maintenance Management, 'Well Maintained Highways', recommends that highway authorities 'should ensure that policies priorities, and programmes are formally adopted by the authority and published. They should also be incorporated into the HAMP (Highway Asset Management Plan). The approval and adoption process should involve the authority's Executive and be explicit, transparent and inclusive'. Cabinet formally approved Walsall's HAMP on 19 November 2008 and the strategy, whilst also being an important separate document is also to be formally included within the HAMP as Appendix G.
- 3.4 This strategy is a direct replacement for its predecessor covering the period 2005-08 which provided the basis for a step change improvement in Walsall's highways maintenance service.
- 3.5 In summary, the strategy provides information on Walsall's highway maintenance service including the purpose; scope; policy; customer service standards; service pledges; the legal framework; the highway network; inspections; condition assessments; performance monitoring and management; programming and priorities; winter service; public lighting; emergency planning; materials and treatments, and financial management. The strategy also includes information relating to the partnership agreement for Highways Repair and Maintenance between Walsall and Tarmac National Contracting which commenced in May 2009. The contract will be for a period of up to 8 years. The strategy reproduces the performance management framework of the partnership arrangement.

- 3.6 This strategy incorporates significant changes to legislation including the Traffic Management Act 2004, Construction (Design and Management) Regulations 2007 and amendments made during early 2009 to the national Code of Practice for Highway Maintenance Management, 'Well-maintained Highways'

4. Resource considerations

- 4.1 **Financial:** The strategy and programme cannot be implemented in full unless there is adequate funding. The programme in Appendix 2 is therefore an indicative programme and will be modified and refined to suit the availability of funding and other considerations. The Council funds the highways maintenance service from both revenue and capital resources. In the current financial year (2009-10), the revenue budget to cover all aspects of the highways maintenance service is £3.66 million. There is also a capital allocation of £3.75 million, of which £2.28m is equal to the Local Transport Plan(LTP) settlement figure for structural highway and bridge maintenance (part of the Council's basic credit approval given by the Government), £0.72m indicative allocation for Minor Highways Improvements, and £0.75m Council mainstream resources.

The revenue budget must cover routine and reactive maintenance needs, such as verge mowing, care of highway trees, safety repairs to footways, pot-hole filling, gully cleansing, winter service, street lighting etc. It must also cover some scheduled maintenance such as footway and carriageway resurfacing. Capital funding is intended for works that prolong the life of the asset, such as reconstruction or deeper resurfacing of carriageways on the more strategic routes.

Progressive introduction of Whole of Government Accounting requires local authorities to align their accounting policies to those of central government. One of the main differences will be the valuation method for highway infrastructure assets by which highway authorities will be expected to explicitly value their highway assets and report a benchmark valuation for the first time in 2010–11. This information will be used, in part, to assess future funding allocations under the Local Transport Planning process.

- 4.2 **Legal:** The Council, in its capacity as highway authority, has a statutory duty under Section 41 of the Highways Act 1980 to maintain highways for which it has responsibility and to keep them available and safe for the passage of the travelling public. Failure to maintain may be grounds for civil action for damages, or, in extreme cases, prosecution of the Council or individual officers of the Council. Having a highways maintenance strategy and three year programme of planned maintenance works is not in itself a defence in any such action, but their implementation in full would greatly reduce the chances of any successful civil or criminal proceedings.

The Code of Practice for Highway Maintenance Management, 'Well Maintained Highways', recommends that strategy documents and asset management plans are prepared in a way that demonstrates a systematic and logical approach to the delivery of highway maintenance services.

- 4.3 **Staffing:** Responsibility for the strategy and the progressive introduction of asset management practice will be driven from existing resources within the Highways Maintenance Group. Daily management and control of highway assets will remain the duty of those officers who have direct management responsibility for each of the highway asset categories listed in the Plan. As such, there are no direct staffing implications arising from this report.

5. **Citizen impact**

- 5.1 The Corporate Plan identified that the Citizens Panel ranked improving the condition of the boroughs roads as their second highest priority. All road users depend on a good reliable service from our highway network to sustain economic and transportation needs and support the buoyant economy that exists in Walsall. The strategy reinforces the integrated framework for the delivery of highway maintenance across the borough's highway network. Through a strategic approach, it will identify the optimal allocation of approved resources in a way that takes a long term view, aimed at meeting the current and future needs of highway users.

6. **Community safety**

The continued implementation of strategic asset management principles will bring improvements to the way in which the Council manages the highway network. Improvements to the condition and management of our roads, footways, cycle ways, public rights of way and lighting can have a positive impact on crime prevention. By maintaining a pleasant, clean and well-maintained appearance, highway users will generally feel more safe and secure and be encouraged to make better use of the network facilities available to them.

7. **Environmental impact**

- 7.1 The strategy and three year programme, wherever possible, minimises any adverse environmental impact that provision of the service may have. Walsall recycles almost 100% of arisings from highways maintenance works by reusing the material as sub base and has undertaken many trials of in-situ recycling to promote efficient use of aggregate and transport within the borough.
- 7.2 The HAMP has a section dedicated to 'Recycling and Sustainability' which has been produced in consultation with the Council's officer for climate change. It highlights the need to consider issues that affect the environment, such as noise pollution, light pollution, waste management and recycling of highway construction materials when designing, planning and undertaking maintenance activities. Environmental obligations dictate a greater need to focus in detail on local and national initiatives and policies that target sustainability issues. The Plan promotes the following priority areas whenever practical or economically viable:

- Sustainability in the consumption and production of resources.
- The effects of climate change and energy efficiency.
- Natural resource protection and environmental impact.
- Sustainable and maintainable community objectives.

The Sustainable Community Strategy promotes better use of our existing roads and supports investment in the road network.

7.3 The strategy and HAMP positively encourages officers to consider environmental issues and provides signposts to environmental publications such as:

- 'Securing the Future' Government strategy for sustainable development.
- 'Sustainable Development Strategy and Action Plan for Civil Engineering' published by the Institute of Civil Engineers.
- 'Sustainable Development Action Plan' released by the Highways Agency.
- Walsall Council's 'Climate Change Strategy'
- Black Country Core Strategy

7.4 A climate change risk assessment is being carried out across the full range of highway assets. The work is being conducted under the guidance of Walsall's climate change officer and the completed risk assessments shall be recorded in the appendices of the HAMP.

8. Performance and risk management issues

8.1 **Risk:** The Code of Practice for Highway Maintenance, 'Well Maintained Highways', recommends how highway authorities should properly maintain their highway network. It is not mandatory, but is often used as a benchmark in any legal action arising from alleged failure to maintain the highway. Risk managers usually recommend that local highway authorities publish a strategy, which sets out how policies, procedures and locally adopted standards may differ from the Codes of Practice. Exceptions are highlighted in the strategy for this purpose.

The role of the highway authority carries with it significant responsibilities and consequently significant risks. If highways are not inspected according to predetermined regimes and kept in a reasonable state of repair, damages may be payable to third parties who allege they have suffered loss or injury as a consequence of failure to maintain. The strategy has been produced in consultation with the Council's Risk and Insurance officers. It notes that risk management practices across the country have significantly sharpened in response to what has become an increasingly litigious society, significant sums have been paid out by authorities for public liability claims, and the frequency of corporate manslaughter claims have become more common.

A key objective of the strategy is to integrate with the HAMP to co-ordinate and deliver a well-maintained highway network which is essential if we are to control and minimise risk to the Council.

- 8.2 **Performance management:** The strategy has a chapter dedicated to 'Performance Indicators, Comparison & Targets' which has been produced in consultation with the Council's Corporate Performance Team. Actual performance against individual asset groups is measured through a combination of National Indicators, Local Indicators, comparisons and targets, in line with Walsall's Corporate Integrated Planning and Performance Framework (CIPPF). There is a fundamental requirement for all authorities to secure continuous improvement in the way they exercise their functions and the CIPPF sets out how the Council's planning processes interlink, demonstrating how resources and services should be managed.

The long term commitment for improvement of Walsall's highway maintenance service has been re-affirmed with the signing of a partnership agreement for Highways Repair and Maintenance between Walsall and Tarmac National Contracting. Commencing in May 2009, the contract will be for up to eight years and has already brought significant opportunities for collaborative working practices and fresh opportunities to monitor and record performance. The strategy reproduces the performance management framework of the partnership arrangement.

9. **Equality implications**

The strategy supports the Council's equal opportunities policies by providing a well managed transportation network that benefits all members of the community and improves accessibility, particularly for those with disabilities. The way the highway network is managed and maintained can have a significant bearing on improving social inclusion and this has been recognised in the strategy and the three year programme.

The strategy document is offered upon request in a number of languages, large print, Braille and audio tape.

10. **Consultation**

To reduce the environmental impact of the strategy consultation exercise, only a limited number of paper copies of the document have been produced. The majority of consultation has been carried out electronically via email and through a specific Highway Maintenance Strategy 2009-12 web page on the Council's website. Consultation that has taken place has included Council officers, elected members and our partners.

The list of partner organisations invited to participate in the consultation exercise includes:

Birmingham City Council, Wolverhampton City Council, Sandwell Council, Solihull Council, Coventry City Council, Dudley Council, Police, AA and RAC, Centro, Ambulance Service, Fire Service, Freight Transport Association, Black Country Chamber of Commerce, Chief Engineers and Planning Officers Group Core (CEPOG) Support Team, WHG, WATMOS, Walsall Regeneration Company, Walsall Partnership, the Local Neighbourhood Partnership Team,

Walsall Disability Forum, Walsall Primary Care Trust, religious and significant minority interest groups.

Additionally, in order to achieve effective co-ordination, statutory undertakers (e.g. British Telecom, South Staffordshire Water) will all receive the three year programme with a view to reducing traffic congestion whilst schemes are carried out. Residents in streets affected by highways maintenance works are informed by letter of what to expect, prior to the works taking place. The strategy also includes a continuous consultation process and specific stakeholder consultation to measure contractor key performance indicators during and after completion of major highways maintenance schemes.

Walsall is also taking part in a National Public Satisfaction Survey concerning Engineering and Transportation which is a Government pilot where people in 77 areas are to be asked identical questions to help find areas of best practice to gauge public opinion on highways & transportation issues within each borough. The survey is being conducted by Ipsos MORI and 4,000 questionnaires were mailed out on 12 June 2009 to randomly chosen people within the borough. The information that we receive will be used to inform and shape future service provision.
