

Walsall Health Inequalities Strategy *2008-2012*

Draft

Introduction

The scale and persistence of health inequalities in Walsall remain major challenges for Local Government, the NHS and other partners, despite extensive work carried out in the Borough in recent years. Reducing the gaps between the health experiences of different groups of Walsall citizens requires a strong focus on partnership working.

This Health Inequalities Strategy for Walsall builds on work already undertaken by NHS Walsall, Walsall Council and their partners - and in particular in the innovative 'Increasing Life Expectancy Commission'.

The Walsall Strategic Partnership has already demonstrated its strong commitment to reducing health inequalities through the selection of Local Area Agreement (LAA) targets which focus on life expectancy (with a local agreement to include Infant Mortality as a subset) and the underlying determinants of health.

The strategy was developed following a rigorous review of the health inequality workings in Walsall by Grant Thornton, the appointed auditors of NHS Walsall and Walsall Council, and it is informed by interviews and continuing conversations with key stakeholders in the Borough.

Aim

To reduce health inequalities by building on the work already established in the Borough and further developing integrated, accessible and appropriate services which address the wider determinants of health to enhance the health and quality of life of all Walsall citizens.

Context

Walsall's Strategic Approach

The overarching strategy for improving quality of life is the Walsall Partnership's 'Sustainable Community Strategy' and its key priorities for improvement are in the LAA (many of its 26 targets directly address Reducing Health Inequalities).

The 2021 Vision for Walsall is;

Walsall will be a place to live, work and invest, where . . .

- people get on well with one another
- people can get around easily and safely

- people support and look after one another
- there are more and better jobs for local people
- people can live an independent and healthy life
- there is a wide range of facilities for people to use and enjoy
- people consider the impact of what we do now on future generations
- there exist high-quality and distinctive designs of buildings and spaces
- growing up is as good as it can be and young people fulfil their potential
- people are our strength and have the skills and attitude required by employers
- everyone has the chance to live in a home fit for their purpose and fit for the future
- people feel proud to live in Walsall.

This Health Inequalities Strategy will contribute directly to the delivery of this vision.

Population

At the last census, Walsall had a population of 253,499, almost a quarter of which were children and young people under the age of 18. It was estimated in 2006, that 17% of the population were over the age of 65. The number of people in this age group is projected to grow by an estimated 10,000 over the next 20 years, bringing significant implications for both health services and social care.

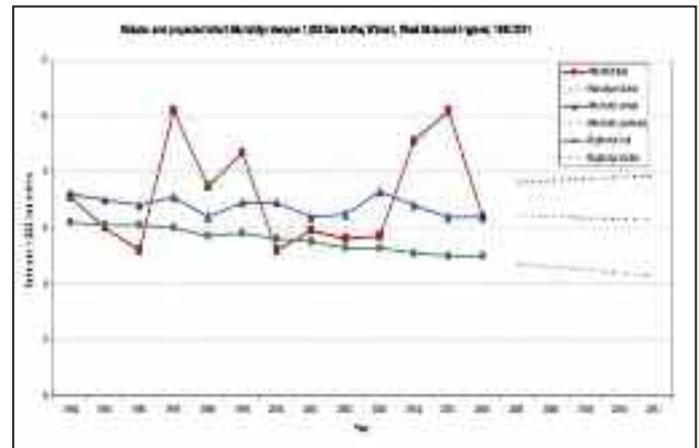

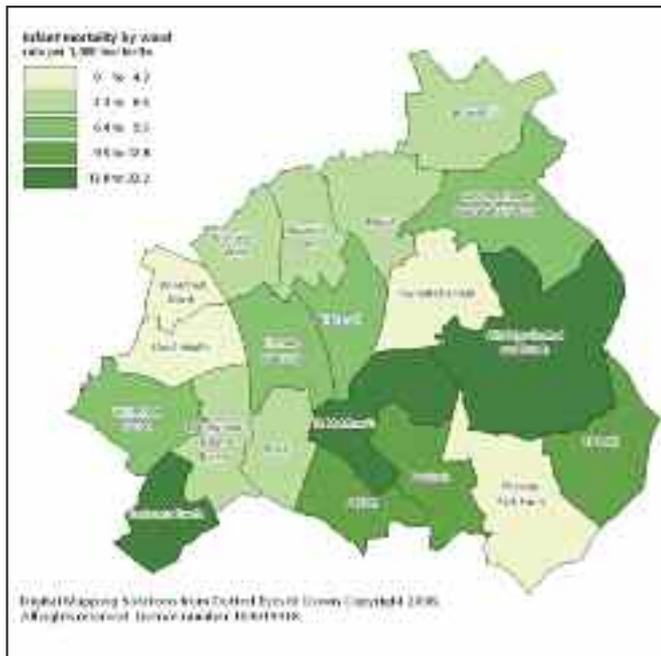

Ethnicity

The population of Walsall is increasingly diverse: whilst 13.6% of Walsall residents are of BME origin, this rises to 21.2% of children and young people, and 23.8% of under-5's.

Poverty

Child poverty can be seen as the underlying determinant of a wide range of outcomes, such as health and attainment. Nearly a third of children in Walsall live in poverty. Some 30% live in households in receipt of workless benefits or tax credits and those whose income (excluding housing benefits) is below 60% of the median before housing costs (15,988 children under 16). This is up from 27% in 2004. Just two wards, Palfrey and Birchills Leamore, together account for 61.4% of the increase in the number of children in poverty.

Figure 2. Infant mortality in Walsall:

In 2005, the Local Strategic Partnership commissioned a major study to identify the key factors affecting life expectancy in all the wards in the Borough. The intention was to identify how the partnership could address the national Public Service Agreement [PSA] target of reducing inequalities in health outcomes by 2010. The study enabled short to medium term interventions to be targeted on specific wards in order to maximise the overall impact on the reduction of health inequalities in the Borough. This work was singled out by the Department of Communities and Local Government (DCLG) in its best practice guide to what works in neighbourhood renewal as offering lessons for all strategic partnerships wishing to tackle health inequalities.

However, the Walsall Strategic Partnership recognised that, in the longer term, tackling deep seated health inequalities required greater emphasis on improving educational attainment, employment opportunities and income, reducing crime and addressing lifestyle issues (smoking in particular).

In 2006, The Health and Social Care Partnership carried out a gap analysis between the pattern of health inequalities and health improvement initiatives already in place and those still to be undertaken. The action plan produced from this analysis was designed to increase the impact which the Local Authority and Primary Care Trust (together with voluntary sector and other third sector providers) might have on reducing health inequalities.

Reducing Health Inequalities

What works well in Walsall?

- Walsall has an established and innovative child measurement programme which pre-dates and goes beyond the requirements of the National Child Measurement Programme.
- 87% of young people undertake at least two hours of physical activity within or outside the school curriculum.
- School exclusions are half the rate of the borough's statistical neighbours.
- Key Stage 1 reading results have improved: Walsall is now in top third of all councils.
- Access to services for children with mental ill-health has improved: In 2006/07, the waiting time for accessing Child and Adult Mental Health Services was 10 weeks; this reduced to 7 weeks in 2007/08.
- New services implemented in August 2007 have shown early interventions having positive effects on the number of children subject to a Child Protection plan in domestic abuse categories.
- Teenage conception rates have dropped by over 20% in Walsall since 1998, at a much faster rate than many of our closest neighbours, although reaching the nationally defined target by 2011 remains challenging.
- Walsall is demonstrating good progress in reducing cardiovascular disease mortality. The 2010 Our Healthier Nation target of a 40% reduction among the under-75's will be met.
- A successful Health Trainer Service has been

established in Walsall which offers residents one-to one-support and advice relating to healthy eating, physical activity and quitting smoking targets. The service targets residents in socioeconomically disadvantaged wards.

- Access to Genito-Urinary Medicine clinics has improved significantly. The percentage of people able to get an appointment within 48 hours increased from 38% in 2005 to over 80% in 2007.
- Early terminations of pregnancy are significantly improved rising from 21% in 2002-3 to 44% in 2005-6.

- Since September 2008, Walsall MBC have been implementing and actively promoting the Government nutritional standard for the schools for which it provides a school meals service.
- 269 non-decent homes in the private sector were made decent during 2007/08, 69 of which housed children and young people.
- Since its set up, the Welfare Rights Service there has been a gain in benefits of £110m across borough, with New Benefit Maximisation of £6.8m 2007/08 and £8m+ 08/09.

What remains a challenge?

- Currently 6% of Walsall's residents are unemployed (twice the regional average of 3.5%) with male unemployment at 8.9% compared with a regional average of 4.9%.
- Prevention strategies are still failing to deliver, with no better than a quarter of the population consuming five or more portions of fruit or vegetables a day.
- The West Midlands has the lowest rate of adults participating in at least three 30-minute sessions of moderate intensity physical activity per week (19.3%). Walsall has the 3rd lowest rate of all LA areas in the Midlands and 6th lowest rate of all LA areas within the country at 16.1%
- Obesity levels exceed national rates.
- The proportion of low birth weight babies in Walsall is higher than the regional and national average.
- Between 2004 and 2006, the suicide rate rose by 37% for men and by 31% for women.
- 5 GCSE A* - C passes have increased by 5% to 41% in 2008 but the gap with similar councils still needs to close.
- 20.7% of children in the borough are eligible for free school meals compared with 14.3% nationally.
- Nearly a third of children in Walsall live in poverty. 29.7% live in households in receipt of workless benefits or tax credits and those whose income (excluding housing benefits) is below 60% of the median before housing costs (15,988 children under 16). This is up from 27% in 2004.
- Just two wards, Palfrey and Birchills Leamore, together account for 61.4% of the increase in the number of children in poverty.
- Poor housing is a continuing issue, particularly in the private sector: Dampness, overcrowding, and poor repair contribute to poor health and accidents.

- Around 20% of households in Walsall experience fuel poverty; this proportion is likely to increase in the current economic climate.

Walsall - A Health Strategy for all Citizens

The citizens of Walsall have lived with a rapidly changing social and economic environment for two decades. The dramatic loss of industrial employment in the 1970s, which saw over a third of a million jobs disappear across the Midlands, transformed employment opportunities and the experience of economic stability in the Borough. Changing social patterns have transformed the patterns of family life and, whilst incomes have increased for most people, the gap between the higher and lower income groups has widened significantly.

Likewise, whilst there have been dramatic improvements in life expectancy and significant reductions in infant mortality over this period, the gap between higher income groups and lower income groups has widened remorselessly, both nationally and within Walsall.

No single area of social policy can be treated in isolation. The Treasury's Cross Cutting Review examining health inequalities makes the point clearly that the complex interaction between education, income, employment, housing, family structure, geography and place of birth interact in complex ways to shape the health experiences of communities in the UK. Indeed, the epidemiological profile of Walsall acts as a "tracer" for the effectiveness – or otherwise – of the totality of public services available in Walsall rather than the NHS alone. NHS alone.

We know which areas to target

- Walsall is divided in terms of access to public and private resources between the east and the west of the Borough. The 'Increasing Life Expectancy by Reducing Inequalities' study undertaken for the Walsall Strategic Partnership (2006) provides a more detailed ward-by-ward analysis of this differentiation. There is a need to target resources for education, housing, employment, economic development, crime reduction and healthy lifestyle support to the wards of St Matthews, Bloxwich East, Pleck, Blakenall, Bentley and Darlaston North, Willenhall South, Palfrey, Bloxwich West, Birchills Leamore, Darlaston South and Brownhills.
- The pattern of morbidity and mortality in the Borough is differentiated by gender, with males at higher risk of premature death and ill health due to the lifestyles and family circumstances, therefore there is a need to target resources and raise awareness for Men especially in the more deprived areas of Walsall.
- The pattern of morbidity and mortality in the Borough is also differentiated by ethnicity, with those coming from South Asian and African-Caribbean backgrounds exhibiting higher rates of diabetes, stroke and coronary heart disease than the White community.
- Access rates to acute hospital provision are differentiated by income (and therefore geography).
- The proportion of young people not in employment, education or training [NEETs] is again unequally distributed between the east and the west of the Borough.

We know what to do - because the evidence base is well established and well researched in Walsall

'Tackling Health Inequalities - a Programme for Action' [published in 2004 by the Department of Health] demonstrated the interaction that exists between the underlying determinants of health, lifestyle choices, community engagement and family organisation. The subsequent Government White Paper "Choosing Health" published in the same year identified key national health improvement targets, which were designed to reduce health inequalities. It pointed out that the most affluent groups in our society expect their health to continue to be good

half as often again as do lower income groups.

In 2004, the Director of Public Health for Walsall produced an equity profile of all the 22 major health inequality targets across Walsall. The following year, the Walsall Strategic Partnership commissioned "Increasing Life Expectancy by Reducing Health Inequalities", a major study of Walsall which identified the key actions to be taken to directly address health inequalities where they arose in different parts of the Borough. Importantly this study showed that to have the biggest and most rapid impact on increasing life expectancy there needs to be a focus on the very young and very old.

Our Children and Young People's Plan needs analysis shows how we need to prioritise key determinants of health inequality (such as lifestyle and aspiration). The Walsall Partnership Child Poverty analysis is helping us to target those areas with the greatest levels of deprivation and has informed our Child Poverty Reduction strategy.

Based on best practice from the Social Exclusion Unit, a Local Accessibility Action Plan has been developed by a multi-agency working group and has been endorsed by Cabinet and Walsall Partnership. This will allow partners to assess more systematically how people facing social exclusion can access key activities, and to work more effectively together on implementing solutions.

As the Joseph Rowntree Foundation has pointed out, the key drivers for health inequality lie in the areas of low income and poor educational attainment. The "Increasing Life Expectancy by Reducing Inequalities" study in Walsall confirmed that these two factors outweighed actual patterns of morbidity in determining life expectancy, although it also highlighted the important contribution to health inequalities of smoking and obesity.

Our Priorities for Action in line with Walsall Strategic Partnership Three Pillars

1. People

Health

- Continue to implement the Walsall Strategic Partnership's 'Increasing Life Expectancy by Reducing Health Inequalities' 2007-2010 Action Plan using evidence-based interventions appropriate to each ward in the Borough in order to deliver the 2010 life expectancy and infant mortality targets. This includes:
 - To reduce smoking in pregnancy, target smokers with quit support and to reduce sales of counterfeit and contraband tobacco.
 - To continue work towards reducing teenage conception rates.
- Work to improve mental health and well-being service provision.
- Develop a health nutritional standard for schools through a pro-active healthy school meals programme

2. Places

Housing/Environment

- To improve the physical environment of Walsall's citizens:
 - Working towards providing a clean and safe environment which promotes physical activity, reduces the risk of road traffic accidents and leads to improvements in the physical and social health.
 - Prioritising the elimination of fuel poverty - firstly in households with older people and young children.
 - Working to improve housing conditions, particularly in the private sector, by reducing damp, overcrowding and other factors known to adversely affect health.
 - Working to reduce accidents in the home.
 - Continuing to invest in housing related support programmes and build partnerships with voluntary agencies, charities and housing associations to provide local services as effectively and efficiently as possible.
 - To ensure all Walsall residents have the opportunity to access to the

cultural and leisure opportunities and other activities as a means of increasing social capital.

2. Prosperity

Education

- Improve the educational aspirations and achievements of the whole school age population of the Borough and reduce the gap in education outcomes.

Employment

- To prioritise and enhance work opportunities for parents.
- To ensure that there is a clearer and more systematic approach to identifying and tackling the barriers that people, particularly those from disadvantaged groups and areas, face in accessing jobs and key services.

Poverty

- To increase the aspirations of our citizens to achieve economic security and family stability.
- To work across agencies to reduce poverty and its effects in Walsall.

How will we address these priorities?

- **Health inequalities gap targets:** To identify (in addition to LAA and other existing targets) key 'health inequalities gap targets' in each of the major service areas in order to reduce the incidence of health inequalities across the Borough and target interventions to meet these.
- **Health inequalities impact assessment:** In future all policies and strategies adopted by partners to the Walsall Partnership will be required to undergo an assessment of their impact of health inequalities in the Borough before presentation to Walsall Partnership Board.
- **Improving access to public resources for those traditionally excluded from them:** Particular groups- Men in Walsall, black and minority ethnic communities, lower income groups, people with learning difficulties or mental health needs and people with physical disabilities - are all commonly disadvantaged in their access to the kind of services which determine "control over resources over time". Addressing this disadvantage through targeting of resources will be a central driver of Walsall's partnership work.
- **Raising awareness:** Work will be undertaken to raise awareness in the wider partnership

of the extent of health inequalities in the Borough and how these can be tackled.

- **Communication and information:** Work will be undertaken to raise awareness in the wider partnership of the extent of health inequalities in the Borough and how these can be tackled.
- **Research - where needed:** There will continue to be areas of intervention which will require examination either by reference to research literature or through primary research. Where necessary, we will support Walsall-based research into areas of uncertainty or ambiguity. We will ensure that interventions directed at reducing the incidence of health inequalities are securely based in existing research findings and only when such evidence is absent will we look at initiating new research studies.
- **Joint Strategic Needs Assessment Process:** will be used in tackling health inequalities.

We know that many of our strategies and action plans across the borough already address health inequalities and we want to avoid the risk of 'parachuting in' new actions that are not owned. Therefore the action plan for this strategy can be found in the contributing plans. A table showing how these strategies priority actions are already embedded in delivery plans is shown below.

Priority action	Strategy/Plan	LAA indicator	NHS Walsall World Class Commissioning outcomes
People
